For Immediate Release

Omega Securities Inc. Announces Matching Engine Upgrade

To Our Valued Subscribers:

TORONTO, Ontario, Canada – March 4, 2020 – Omega Securities Inc. (“OSI”) is pleased to announce that on March 30th, 2020 Omega will be promoting the next generation version of our matching engine to our General Testing Environment (GTE) and the 90-day mandatory testing period will begin. The new matching engine will offer significant enhancements to our subscribers and improve overall experience when sending orders and executing trades on either of our trading books; Omega ATS (**Omega**) and Lynx ATS (**Lynx**).

OSI has received regulatory approval for this upgrade to our matching engine.

With a view towards minimizing resources and any disruption to our subscribers, the matching engine upgrade is designed to provide the following key enhancements:

- Reduce the overall latency of our matching engine by optimizing our matching engine processes;
- Re-instate hidden mid-point functionality;
- Offer subscribers the ability to run a symbol spin at any point during the trading day; and
- Implement Level 1 and Level 2 market data feeds.

The upgrade is considered a minor change to OSI’s system and technology, as it does not significantly change the existing behaviour of the way the matching engine operates.

The matching engine will be made available for subscriber testing on March 30th, 2020 for 90 days following which we expect to promote the new matching engine to our production environment.

If you have any questions, please reach out to our operations team at operations@omegaats.com or directly to our Director of Operations Tyler Bignell at 416 646 2428, Tyler.bignell@omegaats.com.

Thank you for your ongoing support of Omega and Lynx.
