

To our valued subscribers,

It has just come to the attention of OSI that despite best efforts the TMX IP will be unable to facilitate the distribution of Omega and Lynx multicast data on our intended launch date of January 3<sup>rd</sup> 2017.

Due to the TMX IP's inability to process and distribute OSI's multicast market data we will be forced to delay our launch until such a time that TMX IP is able to process the feed.

OSI will continue its efforts to assist the TMX IP in implementing the necessary changes on their side to be able to process and distribute our new multicast market data feeds.

As soon as the TMX IP is able to make the required changes and gains the ability to process and distribute the feed a new launch date will be selected, and all market participants will be given sufficient notice as to what the new launch date will be.

We would like to take this time to express our sincerest apologies to all market participants who have worked to implement this change.

If you have any questions or concerns, please contact us at [operations@omegaats.com](mailto:operations@omegaats.com).

Best regards,

**The Omega Team**
