

Lynx ATS Is Now Available For Testing:

Omega Securities Inc. (OSI) would like to invite all of our subscribers, vendors and trading members to begin testing our new trading venue – **Lynx ATS** in our Global Test Environment (GTE). Starting today, October 21st, 2013, any participant with an existing connection to Omega ATS can access the OSI test environment for the purposes of testing Lynx ATS connectivity, market data, and order entry.

Lynx ATS, when officially launched, will be a ‘lit book’ under the Order Protection Rule (OPR) and as such, all liquidity posted to the book may be considered as part of the Canadian Best Bid/Offer (CBBO). We encourage all of our subscribers, market data vendors, service bureaus, and all other connected participants to order their **FREE** GTE session bundles and begin testing. Although Lynx ATS will require separate market data sessions from existing Omega market data sessions, there will be **no additional charge**. Further, additional order entry sessions will not be required and dealers, vendors and direct-connected participants may choose to either:

- Use their existing order entry sessions with the appropriate Lynx ATS FIX tags; or
- Open new Lynx ATS specific order entry sessions, at **no charge**

In the interest of minimizing the development required by our trading participants, OSI will be launching Lynx ATS with all of the functionality, order types, and matching priority currently available on Omega ATS. In fact there will be only two distinct differences between Omega ATS and Lynx ATS at the launch:

1. Brokers entering orders on Lynx ATS will be attributed by default; and
2. Pricing – Lynx is anticipated to have a ‘Maker/Taker’ style pricing model

The official scheduled launch date for Lynx ATS is **February 3rd, 2014**.
